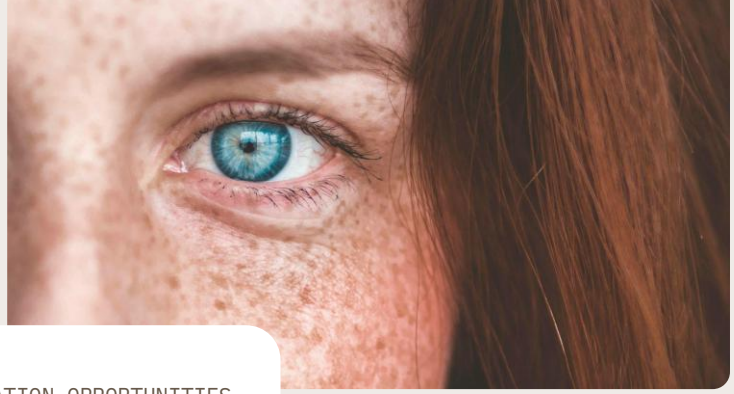
Agenda

1. The document processing crisis
2. The rise of low-code automation
3. Documents and AI
4. AI + low-code = smarter document ecosystems
5. What's next with Syntex, Copilot, and hyper automation
6. Demonstration

The document processing crisis: The invisible costs of manual work



TIME DRAIN
Employees spend hours on routine tasks.

PRODUCTIVITY LOSS
Manual work does not scale with business growth.

MISSED INNOVATION OPPORTUNITIES
Manual systems rarely capture data for analysis or optimization

EMPLOYEE BURNOUT AND TURNOVER
Talented staff leave for more meaningful work.

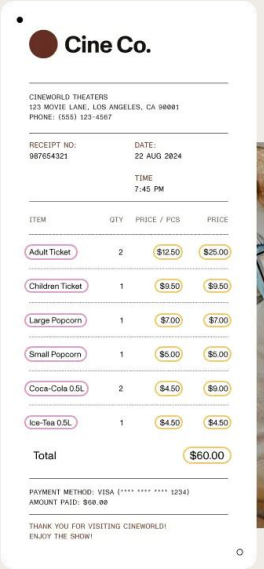
RISK OF NON-COMPLIANCE
Harder to audit and can lead to penalties or fines.

2023 SURVEY BY ZIPPIA

On average, employees waste more than 21 days a year doing menial or repetitive tasks at work.

The rise of low-code solutions

- Enables users to build automated workflows, apps, or processes
- Incorporates a visual interface, pre-built connectors, and minimal hand-written code
- Lowers the barrier for both technical and non-technical users



Cine Co.

CINEWORLD THEATERS
123 MOVIE LANE, LOS ANGELES, CA 90001
PHONE: (555) 123-4567

RECEIPT NO: 987654321
DATE: 22 AUG 2024
TIME 7:45 PM

ITEM	QTY	PRICE / PCS	PRICE
Adult Ticket	2	$12.50	$25.00
Children Ticket	1	$9.50	$9.50
Large Popcorn	1	$7.00	$7.00
Small Popcorn	1	$5.00	$5.00
Coca-Cola 0.5L	2	$4.50	$9.00
Ice-Tea 0.5L	1	$4.50	$4.50
Total			$60.00

PAYMENT METHOD: VISA (**** **** **** 1234)
AMOUNT PAID: $60.00

THANK YOU FOR VISITING CINEWORLD!
ENJOY THE SHOW!

LOW-CODE TOOLS TYPICALLY OFFER:

- Drag and drop interfaces
- Conditional logic and triggers
- Prebuilt integrations (connectors)
- Templates for common use cases

Demonstration

- Low-code automation
- Solutions for both online and on-premise SharePoint

Nutrient

Pillars of document management

Classification

Identify and categorize documents

Extraction

Pull structured/ unstructured data from documents
- OCR, AI templates
- Makes information usable

Transformation

Format, enrich, and validate data for workflows
- Lookups, normalization
- Split/merge as needed

Review

Ensure accuracy with rules and human checks
- Confidence thresholds
- Rules engine & exceptions
- Human-in-the-loop

Save for use

Archive and organize for retrieval and compliance
- Searchable storage
- Audit trails
- Feedback loops for improvements

Looking ahead to the future of document workflows

1

Contextual, predictive IDP

- Intelligent Document Processing (IDP) is now context-aware and adaptive
- AI predicts what users need next—minimizing manual intervention

2

Syntex: AI-native content

- Auto-classifies, extracts, and secures content using AI
- Converts unstructured documents into searchable knowledge assets

3

Copilot: Automation in daily workflows

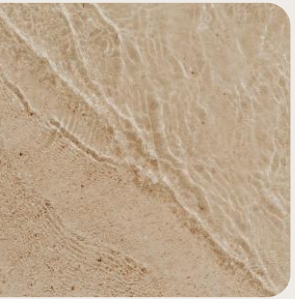
- Embedded in M365 apps for real-time assistance
- Natural language commands enable quick document creation, analysis, and task execution

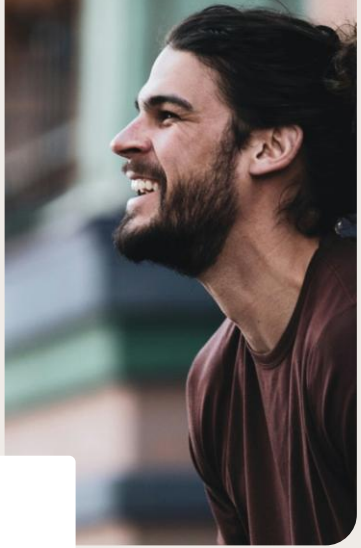
4

Autonomous agents

- Task-driven bots that execute multi-step processes independently
- Great for escalation handling, approvals, or document routing without human prompts

Demonstration





Automation in daily workflows

Nutrient

Beyond Microsoft 365

- Chat and interact directly with documents
- In-app AI Assistant
- Semantic Kernel, SDKs, and more
